

SCALE BLASTER Water Conditioner

For Commercial Ice Makers

#65936

The Scale Blaster Water Conditioner is an affordable, space-saving, low-maintenance, and environmentally friendly alternative to regular water softeners. It's a one-time investment with no salts or chemicals to purchase. It reduces filter clogs, biofilm, and contaminants.

Scaleblaster works by utilizing modulating frequency waves that cause calcium carbonate molecules to lose their adhesive properties, preventing scale buildup, and eliminating any existing scale. The waves are generated from the computer control box, and sent through a cable to the induction coil that is wrapped around the pipe or incoming water supply line.

- No more cloudy ice cubes or clogs!
- Takes up less space than regular water softeners
- Easier and more affordable to maintain
- Requires no salt or chemicals
- 20-25 year lifespan
- Complete package includes control box, pre-wrapped pipe and coil, de-scaler and filter
- 1000 gallon filter reduces chlorine and color
- Non-intrusive to the water
- Green product
