

SLOAN®

TMO Single-Flush Side Mount Retrofit

#85606

Smart Sense Technology™

Sloan® SFSM flushometers are equipped with Smart Sense Technology™, which applies extended range and logic techniques to significantly reduce water usage in high-use urinal applications. When there is a continuous line of people, the maximum amount of water used is only 2.5 gallons, assuming a 0.5 GPF diaphragm kit, regardless of the number of users.

Automatic Operation

The sensor sets the flushing mechanism when the user is detected, and completes the flush when the user steps away.

Manual Operation

Sloan's SFSM flushometers can also be activated manually by pushing the black TMO button.

Hygienic

Touchless, sensor activation eliminates the need for user contact to help control the spread of infectious diseases. The 72-Hour Sentinel Flush keeps fixture fresh during periods of non-use.
